Best before 2012

Tone is working with the big guns of construction like Balfour Beatty Power networks on the site where the 2012 Olympic games are to be held in London.

Power Division Go Olympic

Tone Power Division is proud to be supplying cabling and support structures for the forthcoming Olympic Games in London 2012. The much talked about logo for the games launched at the beginning of June has been commented on – unconnected, it reflects the bright vibrant colours of Tone's very own logos!

Safety Awarded

T3 Futures Project: Tone brings home 10 Safety Awards

Not satisfied with winning the Mace Site Safety Awards two months in a row, Tone personnel working at T3 were awarded with a record number of safety awards by BAA's Chief Safety Advisor, Bob Pettman. When he made the award Bob announced,

"I have worked for BAA for 10 years and in that time I have only issued 3 safety awards. Today I am issuing 10 in one go, to the men of Tone Scaffolding."

The awards were made because Mr Pettman was impressed with not only the men's attitude to safety, but the Company's obvious commitment to safety, from the top down.

When the chippies are down

So that Tone can provide a seamless and competitively priced full service to clients, an in-house dedicated carpentry division with its own chippies has been set up to make boarding, hoardings and temporary flooring in-house for exhibitions and construction sites.

'At times the work has gruesome implications, we have to make access possible and safe for the services to get bodies out'

'It is rewarding as you can see the effect once a job is completed that otherwise would not have been possible without our support structures'

5 Years on at Potters Bar

In May 2002 disaster hit Potters Bar when rail carriages from a fast train slewed across the track on the approach to the station. A road bridge was damaged and later partly collapsed. The rear carriage ploughed across two platforms and became wedged under the canopy of the station roof.

Little known at the time but essential – Tone were called in to shore up the aftermath of the horrendous incident. Tone could almost be considered an emergency service without the blue lamp, setting the path for rescue and repair, securing structures to prevent further collapse and aide access to retrieve debris and victims.

Five years on, with the roof of the station and buildings having been lifted off and replaced by cranes, Tone Scaffolding still features as the rebuild completes.

Dangerous Structures Made Safe

'Safety is our main consideration, we have won awards for it'

London Boroughs call Tone in to help make buildings safe from small 6 bar jobs to projects requiring an entire yard full of scaffolding.

It's dangerous out there – someone has to do it – Tone came to the rescue when the top 2 floors of a office building collapsed in central London. The building had to be made safe so access could be gained for evaluation and later repair work to be carried out with the safety of the inspecting surveyors and builders paramount.

Alight for Wembley

**Here we go, here we go,
here we go!**

Tone scores a hit and guides the way with structure support for lighting up Wembley station, right opposite the all new Wembley Stadium. It has already made a great difference for travellers visiting the new stadium.

Best in Show

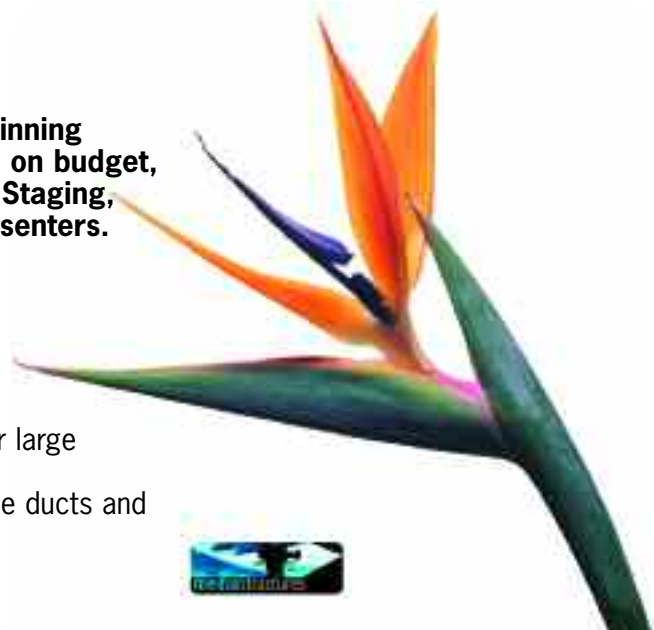

Organisers of the Chelsea Flower Show 2007 chose award winning Media Structures from the Tone group to bring the project in on budget, on time and help produce the best event coverage possible. Staging, rigging and on-location studio were supplied for the BBC presenters.

A down to earth member of team said:

*'We'd like to think we did a blooming lovely job.
No hybrids here – pure class!'*

Media structures provides a unique service to host broadcasters for large outdoor events from hard standings, vehicular access, editing suite accommodation, platforms and stand up broadcast structures, cable ducts and bridges, air-conditioning to secure perimeter fencing.
